Home Gargano — Europe's Ultimate All-in-One Travel Platform

Home Gargano is a multichannel travel platform designed to simplify exploration across Europe for tourists worldwide. With a mission to provide a seamless, all-in-one travel experience, the platform connects customers, travel agencies, and administrators through a unified system.

In partnership with Adamo Software, Home Gargano developed a cutting-edge website and mobile app to deliver real-time travel solutions, integrating with leading global distribution systems (GDS) like Amadeus, Agoda, Booking.com, and Airbnb.

Business challenges

The collaboration between Home Gargano and Adamo Software aimed to tackle key challenges in the European travel market:
1. Simplify travel planning for customers by offering all services in one place
2. Provide competitive pricing and real-time availability for flights, hotels, and tours
3. Streamline agency operations with synchronized GDS integration
4. Enhance administrative control over pricing, bookings, and agency management

What we've done

Discover how Adamo Software transformed Home Gargano into the go-to platform for travelers and agencies across Europe.

1

Effortless GDS connectivity

The platform integrates effortlessly with top GDS providers like Amadeus, Agoda, and Booking.com, offering customers real-time access to flight tickets, train schedules, and accommodation at competitive rates.

2

Streamlined Agency Tools

Travel agencies can manage their offerings—tours, hotel bookings, car rentals, and restaurant reservations—through a robust, real-time inventory system. Built on a secure database, this tool allows agents to update pricing, check availability, and monitor daily sales with ease.

3

Centralized admin command

Administrators benefit from a powerful, centralized dashboard that provides full oversight of the platform. This intuitive interface enables them to manage agency accounts, approve bookings, adjust sales policies, and extract detailed reports on gross prices, mark-ups, commissions, and transaction fees—all designed to optimize operations and strategy.
